

Volvo Truck Facilities

Istanbul, Turkey

Client

Volvo Truck Corporation

Value

US \$2,5 million

Completion

September 2000

Assignment

Project Management

The Volvo Truck Facilities project consisted of the renovation of the 5-storey office building and the construction of two new pre-fabricated buildings, a 2500m² Warehouse and an 1800m² Truck Service Building.

The project started after the big earthquake in Turkey in 1999. The office building was 20 years old and after an earthquake resistance analysis, it was decided to retrofit the building. A special study was carried out and shear walls from each corner now support the building.

The project was completed within 52 weeks and has become the Volvo Truck Facilities headquarters in Istanbul.
